

Company's Name : PT INTI EVERSPRING INDONESIA
Plant Location : SERANG, BANTEN-INDONESIA
Project Name : FORMULATION & REPACKING PLANT
Document Title : ANALYSIS STRUCTURE HERBISIDA

CARBAMATION PROJECT (JOB No. :)	
ISSUE PURPOSE :	
RESULT CODE : A, C, R, F	(A)
NEXT STATUS : FA, FR, FI, FC, AB	()
SUBMISSION DATE :	(27 Juli 2017)
RESPONSIBLE DEPT./PERSON :	(Owner Project / Gallan)
Review Date:	()
A: Approved without Comment; C: Approved with Minor Comment R: Not Approved. Resubmit Incorporating Comment; F: Not Subject to Review/Approval	
Approval or review hereunder shall not be construed to relieve Supplier / Subcontractor of his responsibilities and liability under the Contract.

DOC NO. : IEI-04-CS-138

1. BASIS OF CALCULATIO

1.1 CODES AND STANDARDS

SNI 03 1729 2002 - Tata cara perencanaan struktur baja untuk bangunan gedung

SNI 03 1727 1989 - Pedoman Perencanaan Pembebanan untuk Rumah dan Gedung

SNI-03-1726-2002 - Tata cara perencanaan ketahanan gempa untuk bangunan gedung

Peraturan Pembebanan Indonesia Untuk Gedung (1983)

1.2 MATERIALS AND STANDARDS

Steel Construction : JIS G3101 SS-400

Quality of Steel : $F_y = 240 \text{ Mpa}$

Steel Density : $\gamma_{\text{steel}} = 7850 \text{ kg/m}^3 = 7.698\text{E-}05 \text{ N/m}^3$

1.3 WELDING

Welding electrode : AWS A5.1/D1.1 or JIS Z 3211

Quality of weld: AWS E70XX, $F_y = 70 \text{ ksi}$

2. LOADING

PT. Hema Mandiri

Analysis Structure Warehouse Herbisida

SHEET : 6 of 21

REV. : A

DATE : 31-07-2017

DOC NO. : IEI-04-CS-138

2.1 DEAD LOAD

For model analysis, dead load are considered as selfweight and automatically computed by programs, selfweight factor = -1

Steel : $\gamma_{\text{steel}} = 7850 \text{ kg/m}^3$

PT. Hema Mandiri

Analysis Structure Warehouse Herbisida

SHEET : 7 of 21
REV. : A
DATE : 31-07-2017
DOC NO. : IEI-04-CS-138

2.2 LIVE LOAD

Live loads on Roof based on SNI state :

(2) Beban hidup pada atap dan/atau bagian atap yang tidak dapat dicapai dan dibebani oleh orang, harus diambil yang paling menentukan di antara dua macam beban berikut:

- a. Beban terbagi rata per m^2 bidang datar berasal dari beban air hujan sebesar $(40 - 0,8 \alpha)$ kg/m^2 di mana α adalah sudut kemiringan atap dalam

derajat, dengan ketentuan bahwa beban tersebut tidak perlu diambil lebih besar dari $20 kg/m^2$ dan tidak perlu ditinjau bila kemiringan atapnya adalah lebih besar dari 50° .

- b. Beban terpusat berasal dari seorang pekerja atau seorang pemadam kebakaran dengan peralatannya sebesar minimum 100 kg.

" It means that area of roof which unreachable and unloaded by people, have to be defined by one of these conditions :

- a. Distributed load per m^2 from rain = $(40-0,8*\alpha)$ kg/m^2), where α is slope roof degrees.*

In this case, load on roof is less than $20 kg/m^2$ and no need to reviewed if slope of roof moreover than 50° .

- b. Point Load from people/fireman with their equipments, approximately 100 kg."*

In this calculation,

Live Loads on Roof is Rain Load = $20 kg/m^2$.

Live loads on platform (Checker Plate) : $2,5 kN/m^2$

2.3 WIND LOAD

Wind pressure from structure refer to below :

PT. Hema Mandiri

Analysis Structure Warehouse Herbisida

SHEET : 8 of 21

REV. : A

DATE : 31-07-2017

DOC NO. : IEI-04-CS-138

A. Wind Load Pressure

“ It means that :

(1) Minimum Wind Pressure is 25 kg/m²

(2) Minimum Wind Pressure is 40 kg/m² (if location close with coast and tolerance 5 km from coast)

(3) If Wind Pressure assumed more than (1) and (2) conditions, it will defined :

$P = V^2/16$; where is v = wind speed velocity (m/s) or (km/hr). “

B. Wind Load Coefficient

Where is “ α ” is slope roof

DOC NO. : IEI-04-CS-138

2.4 EARTHQUAKE LOAD

Earthquake Zone

Location Suralaya ; Banten (About 100 km west of Jakarta, Indonesia)

Picture 1. Indonesia Earthquake Zone (SNI-03-1726-2002)

Coefficient Response Spectrum

Earthquake Zone = Zone 4

PT. Hema Mandiri

Analysis Structure Warehouse Herbisida

SHEET : 10 of 21
REV. : A
DATE : 31-07-2017
DOC NO. : IEI-04-CS-138

Soil Classification = Medium Soil

Scale Factor

Importance Factor (I) = 1

Reduction Factor (R) = 4.5

Gravitational Acceleration = 9.81 m/s^2

$$\text{Scale} = \frac{R \cdot I}{E} = 2.18$$

3. LOAD COMBINATION

Load Combination for Steel Structure Design (Ultimate Condition)

Group	SW	DL	LL	Wx+	Wy+	Wx-	Wy-	Ex	Ey
DSTL1	1.4	1.4							
DSTL2	1.2	1.2	1.6						
DSTL3	1.2	1.2	0.5	1.3					
DSTL4	1.2	1.2	0.5	-1.3					
DSTL5	1.2	1.2	0.5		1.3				
DSTL6	1.2	1.2	0.5		-1.3				
DSTL7	1.2	1.2	0.5			1.3			
DSTL8	1.2	1.2	0.5			-1.3			
DSTL9	1.2	1.2	0.5				1.3		
DSTL10	1.2	1.2	0.5				-1.3		
DSTL11	1.2	1.2	0.5					1	
DSTL12	1.2	1.2	0.5						1
DSTL13	0.9	0.9						1	
DSTL14	0.9	0.9							1
Deflection	1.0	1.0	1.0						

4. ALLOWABLE DEFLECTION

Maximum allowable deflection of beam shall be as specified in the following :

Table 2. Deflection Maximum (SNI-03-1729-2002)

Komponen struktur dengan beban tidak terfaktor	Beban tetap	Beban sementara
Balok pemikul dinding atau finishing yang getas	$L/360$	-
Balok biasa	$L/240$	-
Kolom dengan analisis orde pertama saja	$h/500$	$h/200$
Kolom dengan analisis orde kedua	$h/300$	$h/200$

Kantilever Beam

$L/150$

Crane Girder

$L/500$

DOC NO. : IEI-04-CS-138

Wind Pressure : 40 kg/m^2 (0.4 kN/m^2)

Angle : 10° ($0^\circ \leq \alpha \leq 20^\circ$)

Length of pressure area (B) : 5,5 m

Wind Pressure for column =

Winward Pressure = $0,4 \text{ kN/m}^2 \times 6 \text{ m} \times 0,9 = 2,16 \text{ kN/m}$

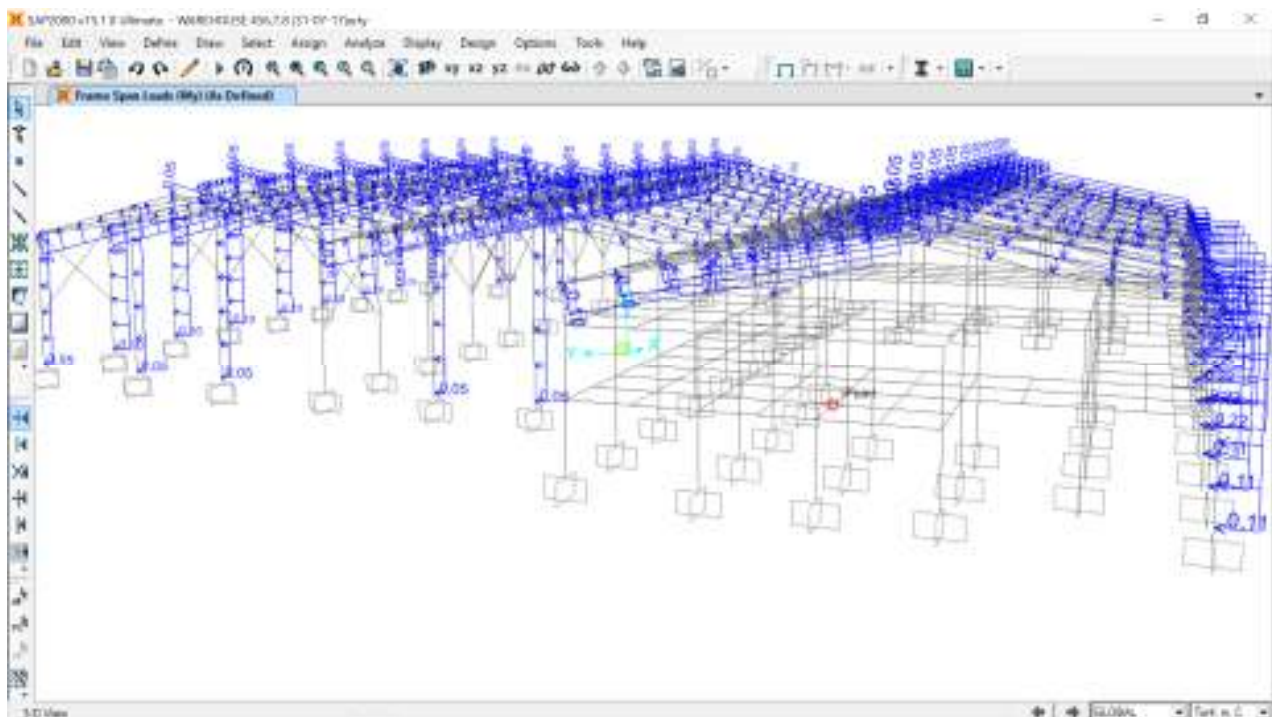

Leeward Pressure = $0,4 \text{ kN/m}^2 \times 6 \text{ m} \times 0,4 = 0,96 \text{ kN/m}$

Wind Pressure for Roof =

Winward Pressure = $0,4 \text{ kN/m}^2 \times (0,02 \times 10) - 0,4 \times 6 \text{ m} = -0,48 \text{ kN/m}$

Leeward Pressure = $0,4 \text{ kN/m}^2 \times 6 \text{ m} \times 0,4 = 0,96 \text{ kN/m}$
